National Solana Treasury (NST)

"A Movement Pioneering a Decentralized Solana Treasury for America"

Version 1.1 — Nov 2025

Executive Summary

The **National Solana Treasury (NST)** is a decentralized movement to build a transparent Solana-based treasury fund that contributes to reducing the U.S. national debt and supporting national causes. By combining community participation, staking yield compounding, and coalition partner projects' contributions, NST creates a self-growing on-chain reserve that demonstrates how blockchain can serve public and national goals. The project's vision is to unite individuals, creators, and crypto projects under a single, purpose-driven cause — building a collective, transparent reserve that benefits the nation.

The **$NSTT token** serves as the governance and participation backbone of the National Solana Treasury (NST). It empowers holders to take part in shaping the Treasury's direction, from voting on governance proposals to influencing coalition partnerships and staking strategies. Beyond governance, $NSTT acts as the unifying symbol of the movement, representing every individual and project contributing to the Treasury's growth. Each transaction, vote, and contribution made through $NSTT reinforces the Treasury's mission: to transparently build a decentralized, community-powered reserve that strengthens both the Solana ecosystem and America's financial legacy.

Mission

"To build the world's first decentralized National Treasury on Solana — a 1 Million SOL fund dedicated to reducing the U.S. national debt."

$NSTT represents a movement for unity, purpose, and technological progress. It bridges between blockchain innovations and national service, where collective action, transparency, and belief in decentralization create lasting real-world value.

Project Principles

1- National Ownership: The National Solana Treasury is established as a voluntary, transparent digital reserve built for the United States. Its purpose is funding and growth, not custodianship. NST actively builds and compounds Solana reserves on behalf of the public, ensuring transparency, accountability, and decentralized governance.

As the U.S. government currently does not maintain an official digital asset reserve on Solana, the NST temporarily manages this fund under DAO and multisig control until such a framework exists. Should the U.S. Department of the Treasury or another authorized federal institution establish a legal mechanism for national digital reserves, any transfer of assets will first require a DAO vote and multisig approval to ensure full community consent and transparent execution.

2- Transparency: All wallets, staking actions, and transactions are publicly visible on the Solana blockchain.

3- Decentralization: Treasury management is governed through DAO voting and multisig wallets.

4- Non-Liquidation: The Treasury's Solana holdings are never sold, only staked and compounded.

5- Purpose-Driven: A transparent and patriotic contribution toward national debt reduction.

6- Collaboration: Coalition partnerships with crypto projects, DAOs, and NFT communities.

The Road to 1M SOL

Currently, there are **four primary sources** projected to grow the Treasury fund:

1. **RWA Products:** We are developing on-chain RWA products that serve America's interests. A portion of the profits generated by these products will be allocated to funding the National Solana Treasury.
2. **$NSTT Creator Fee:** 45% of all Bonk.fun creator fees generated from $NSTT trading volume are automatically directed to the Treasury Wallet.
3. **Compound Solana Staking Rewards:** All Treasury holdings are staked, and both new revenues and staking yields are **restaked quarterly**, compounding growth.
4. **Contributions from Partnered Crypto Projects:** In the early stages, partnership contributions will be modest; however, with continued trust-building, coalition outreach, and promotion, these **partner contributions are expected to become the primary driver** of Treasury growth in later years.

We project SOL Treasury can **organically reach 1,000,000 SOL** based on a 7% annual staking yield beginning with 5,000 SOL in 2026, funded through $NSTT creator fees and NST products profits and one early partner contribution, and expands in upcoming years as partnerships and coalition networks grow across the Solana ecosystem.

$NSTT Tokenomics Overview

Token Name: National Solana Treasury Token
Ticker: $NSTT
Blockchain: Solana
Total Supply: 1,000,000,000 NSTT

$NSTT will be introduced through a **fair launch on Bonk.fun**, ensuring complete transparency and equal opportunity for every participant. No private sales, presales, or early allocations will occur before launch. The entire token supply will be minted publicly and made available at the same time under identical conditions.

The project's founding team will purchase approximately **5% of tokens publicly during launch**, at the same market price as everyone else, to provide early CEX liquidity and stability. This approach ensures that $NSTT remains **community-owned from day one**, reinforcing trust, fairness, and the project's mission of transparency and decentralization.

$NSTT Revenue Model

Revenue Distribution
All project income is automatically divided on-chain into three transparent wallets:
• 45 % — **Treasury Wallet:** dedicated to building and staking the Solana Treasury.
• 45 % — **Operational Wallet:** supports marketing, development, partnership, and community growth.
• 10 % — **CEX Reserve Wallet:** allocated $NSTT exclusively for centralized exchange listings, liquidity, and market-making operations.

This model ensures $NSTT is both **financially sustainable** and **mission-aligned**: every transaction contributes to long-term Treasury growth while continuously funding **Marketing, Development, and Listing activities**. This structure protects the community by ensuring the project remains active, transparent, and well-maintained, preventing the risks of abandonment, inactivity, or scams that often affect community-driven tokens.

Coalition Framework

The National Solana Treasury (NST) invites **crypto projects, DAOs, and NFT collections** to contribute directly to the Treasury fund and become part of a growing national coalition. Each contribution strengthens the Treasury while publicly showcasing the contributor's commitment to transparency and purpose-driven blockchain innovation.

A **public dashboard** will display live Treasury balances, staking performance, and partner contributions, ensuring full transparency across all coalition members.

Recognition Tiers:
• **Founding Partners:** Early or major contributors who play a strategic role in shaping the Treasury's direction. Founding partners will be **included in the Treasury's multisig wallet**, granting them co-signing authority on key Treasury transactions. This structure increases security, accountability, and resistance to fraud or misuse.
• **Strategic Partners**: Active, long-term contributors who support governance and expansion. Strategic partners may also be invited to join or rotate through the **multisig signer group**, enhancing decentralization and collective oversight.
• **Citizen Contributors**: Individual supporters who contribute directly to the Treasury and are recognized through digital badges or NFTs that reflect their civic participation.

This coalition-based model transforms the Treasury into a shared, verifiable, and community-secured fund, where governance and responsibility are distributed among trustworthy and aligned stakeholders.

Legal & Governance Framework

Initial Phase: $NSTT launches as a decentralized initiative without a legal entity.

Entity Formation: Once the project demonstrates sustainable traction, the team may explore establishing a formal legal entity to support compliance, partnerships, and engagement with U.S. financial authorities or other relevant jurisdictions. This entity would focus on enabling transparent operations and on collaborating with policymakers to define potential tax or contribution benefits for individual and corporate donors who support the National Solana Treasury initiative.

To ensure transparent and consistent management of revenues during the pre-entity phase, all creator fees generated from $NSTT activities shall be manually distributed among the project's three designated wallets according to the publicly declared allocation formula:

•45 % to the Treasury Wallet — dedicated solely to staking and long-term reserve growth.

•45 % to the Operational Wallet — reserved exclusively for future marketing, development, and community initiatives.

•10 % to the CEX Reserve Wallet — reserved for centralized exchange listings, liquidity, and market-making operations.

While this distribution is performed manually due to technical limitations, it follows a fixed, pre-announced rule that cannot be altered without DAO approval.

No signer or custodian exercises discretionary control or derives any personal benefit from these transfers.

All distributions are executed as mechanical allocations — administrative movements of funds between official NSTT wallets — and are not considered spending, remuneration, or personal income to any party.

Each transfer is logged publicly on the Solana blockchain, and the resulting balances remain under multi-signature custody until the formation of the NSTT legal entity, which will subsequently assume full ownership and operational responsibility.

Governance: Each $NSTT token equals **one vote**, empowering holders to shape the Treasury's policies. Any major change to Treasury management, wallet distribution, or staking policy requires DAO approval through on-chain voting before execution.

Withdrawal Policy: The Treasury's Solana balance is designed to remain permanently staked and compounding to maximize long-term growth. However, in alignment with the National Ownership principle, periodical withdrawal may be executed solely for transfers to official Solana wallets of the U.S. Department of the Treasury (once such wallets are formally established) for the purpose of national debt repayment or supporting a national cause.

Any such transaction will require DAO approval and will be executed exclusively through the Treasury's multisig wallet, with signatures from designated signatories to ensure full transparency and security.

This mechanism ensures that the Treasury remains **decentralized, transparent, and mission-driven**, while maintaining readiness for lawful cooperation with U.S. authorities if and when such a request occurs.

Marketing & Community Strategy

Core Message — "A Coin with a Purpose." $NSTT focuses on unity, transparency, and contribution rather than speculation.

Community Platforms:
• Twitter (public): primary hub for updates and community discussions.
• Whale Chat: exclusive space for top holders and strategic partners.

• Telegram: coordination and campaign updates.

Reward Campaigns: incentives for content creators and traders, with on-chain verification for every reward.

Content Marketing: on X, TikTok and YouTube campaigns will promote the mission to a global audience.

Transparency Promise: “We will never leave our community in the dark.” Every decision and milestone will be communicated openly, with the community co-driving the project’s direction.

Roadmap

2025: $NSTT launches as a fair launch token on Bonk.fun, focusing on community formation, transparency, and early ecosystem awareness. The team will secure the Treasury and Operational multisig wallets, initiate early CEX listings, and run promotional campaigns to build visibility across Solana and Bonk communities.

2026: RWA Product Launch, CEX Listing, Staking Integration, Partner Onboarding.

2027 onwards: Expanding Partnerships to deepen the coalition and launching new revenue streams to expand the Treasury.

Disclaimer

$NSTT is a community-driven governance token representing participation and support in the National Solana Treasury project. It does not represent equity, investment, or financial returns. All Treasury assets remain fully on-chain, transparent, and under community governance.

Founders’ Note

“The National Solana Treasury Token ($NSTT) was born from a simple belief — that blockchain technology can unite people around a common purpose beyond speculation or profit. We see a future where decentralized communities collaborate to strengthen nations, not divide them. $NSTT is our first step toward that vision — a transparent, citizen-powered token that grows from trust, innovation, and shared hope.”

— The NSTT Founding Team
